SUMMARY

Full-stack developer focused on the Java ecosystem and TypeScript frontends. I write secure Spring Boot backends, design optimized database schemas, and build event-driven microservices that handle real-time data pipelines.

SKILLS

Languages:

Java, SQL, HTML, CSS, TS, JS(MERN), Python, C

Backend:

Spring Boot, REST APIs, CRUD, JPA/Hibernate, JDBC

Frontend:

React, Routing, API Integration, Forms

Tools:

Git, GitHub, Docker, Postman, IntelliJ, VS Code, Maven, Google Colab

Core Concepts:

OOP, Exception Handling, Multithreading, Java Collections Framework

Database:

MySQL, MongoDB(basic)

Cloud Platforms:

AWS

EDUCATION

12TH BOARD (CBSE)

Centurian Public School

2023

B.TECH (AI & DATA SCIENCE)

Parul University

2023 - 2027

ACHIEVEMENTS

- Participated in PU Code Hackathon 3.0 (2026)
- Participated in Codeversity National Hackathon (IIT Gandhinagar, 2026)
- Generative AI Mastermind by Outskill.

PROJECTS

SKILL SCALE

About:

Multi-Stage Testing framework based platform delivers dynamic, adaptive assessments in real time, analyzing behavioral patterns phase by phase to expose deep knowledge and logical gaps.

Tech Stack:

React 18, TS, Monaco, Web Workers, Axios, OAuth2, Spring Boot 4, Java 24, FastAPI, Python 3.13, Gemini 2.0, Postgres 17, Judge0, Docker.

Includes:

High-Fidelity Behavioral Telemetry Pipeline: zero-latency client-side telemetry engine utilizing React useRef matrices to harvest millisecond-level cognitive friction data. continuously tracks seven distinct behavioral vectors like code execution frequency, syntactic hesitation, code refactoring rates, idle thinking & many more.

Remote Code Execution Sandbox & IDE Integration: Engineered an IDE workspace integrating Monaco Editor with a secure reverse proxy that routes compilation requests to the Judge0 API.

AI Diagnostic & Markdown Verdict Engine.

Dynamic Multi-Stage Testing (MST) Orchestration Engine.

and some others... go to [portfolio](#) case study section to learn more...

CAREERCOPILOT [[GitHub](#)]

About:

AI-powered career management platform for undergraduate engineering students. It combines real-time company intelligence, Roadmap Tracker, and skills gap analysis into a single platform giving students everything they need to go from confused to placement-ready.

Tech Stack:

React.js, TypeScript, Tailwind CSS, Spring Boot (Java), MySQL, Docker, Postman, JWT Authentication, Spring Security

Includes:

AI-Driven Predictive Career Roadmap Engine: nested state engine, converts career goals into dynamic, granular learning roadmaps down to daily schedules.

Skills-Gap & Company Telemetry pipeline: automated data orchestration pipeline integrating JSearch and Clearbit APIs to ingest, cross-reference, & analyze real-time corporate hiring data.

Adaptive Skill Diagnostic & Formative Assessment Pipeline.

Hybrid Relational Data Orchestration Layer.

lot to explain... go to [portfolio](#) case study section to learn more...
