PROFILE

B.Tech student in Artificial Intelligence with a strong focus on Full-Stack Java Development. Built web applications using React, Spring Boot, and MySQL through academic and personal projects. Actively strengthening full-stack development skills through hands-on projects...

SKILLS

- Languages:** Java, SQL, HTML, CSS, TypeScript, JavaScript (MERN), Python, C
- Backend:** Spring Boot, REST APIs, CRUD, JPA/Hibernate, JDBC
- Tools:** Git, GitHub, Docker, Postman, IntelliJ, VS Code, Maven, GoogleColab
- Frontend:** React, Routing, Forms, API Integration
- Core Concepts:** OOP, Exception Handling, Multithreading, Java Collections Framework
- Database:** MySQL, MongoDB (basic)
- Cloud Platforms:** AWS

ACHIEVEMENTS

- Participated in PU Code Hackathon 3.0 (2026)
- Participated in Codeversity National Hackathon (IIT Gandhinagar, 2026)
- Completed Generative AI Mastermind by Outskill.

LANGUAGE

English | Hindi | Gujarati | Odia

EDUCATION

Parul University

B.Tech (AI & Data Science) CGPA: 8.23

Centurian Public School Rayagada (CBSE)

Class 12: 71.67%

Class 10: 82.47%

PROJECTS

CareerCopilot | [GitHub](#)

- Developed an AI-powered career guidance platform that helps students and job seekers choose suitable career paths based on their skills and goals.
- Provides personalized career recommendations, learning roadmaps, and skill gap analysis for different job roles.
- Includes resume guidance, interview preparation, and career progress tracking in one platform.

Tech Stack: React.js, TypeScript, Tailwind CSS, Spring Boot (Java), MySQL, Docker, Postman, JWT Authentication, Spring Security.

Consistent Life Builder

- Habit and daily routine tracking web application that helps users build consistency through streak tracking, progress visualization, and smart reminders.
- Frontend completed with a modern responsive UI; backend development and authentication features are currently in progress.

Tech Stack: React, TypeScript, Vite, Node.js, MongoDB (Planned)

Skill Scale – Intelligent Learning & Assessment Platform

- Architected an AI-driven Multi-Stage Testing (MST) framework using a React frontend and Spring Boot core orchestrator to serve dynamic, adaptive technical assessment phases in real time.
- Developed a high-fidelity behavioral telemetry pipeline to silently track millisecond-level user metrics—including question latency, code compilation frequency, and tab switches—to expose genuine logic flaws over rote memorization.
- Engineered a microservices communication bridge to a FastAPI engine leveraging structured cloud LLM APIs (JSON Mode) to analyze raw cognitive load metadata and instantly generate tailored code sub-topics.
- Integrated the Judge0 API for sandboxed code execution alongside an optimized PostgreSQL schema utilizing JSONB structures to securely evaluate runtime test cases and log deep-dive user diagnostic reports.

Tech Stack: React, TypeScript, Spring Boot, Fast API, PostgreSQL, Judge0 API, Cloud LLMs
